January 18, 2011

Dear Rafi,

I am recommending Meyer Global Filters. Their quality of filters and experienced service has brought me to this conclusion. They have provided me with their expertise by inspecting and correcting any filter needs or problems we may have and at the same time making us greener.

Because their pricing is low, I am able to design my planning while using much more efficient filters they have provided for my hospital. David has been useful in giving us valuable insight regarding filters we are using, why we are using them and how you can increase filter sustainability through correct mag gauge settings.

David, the president of Meyer Global Filters, gave us a free filter show. This show was very informative – explaining the differences between filters, the importance of catching 2 - 4 microns in a hospital environment, variable speed fan effects, etc.

I appreciate the opportunity in doing business with Meyer Global Filters. Providing the best indoor air quality for our patients is important to us. David from Meyer Global Filters has made us greener, saving us money and I highly recommend him.

Sincerely,

Ron Reed
